

Engage your students with smart environments

Creating a Smart Campus to exceed the expectations of today's teachers and motivate multimedia, multi-linked students doesn't have to break the budget.

Ergotron's affordable, industry-leading display mount and mobility products are dynamic platforms that bring learning environments to life. Our solutions allow educators to disseminate better content within tight budgets by delivering:

- **FLEXIBILITY.** Adapting technology to varying skill sets and teaching and learning styles. Promoting configurable products that adjust to a diverse demographic in virtually any learning environment. Open architecture designs fit nearly any equipment, and move the technology to where it is needed.
- **COLLABORATION.** Technology that facilitates interaction and enhances the connection between teachers, students, colleagues and peers—in, around and beyond the campus. Telepresence platforms that aid in transporting the instructor and interactive content to students and back again.
- **PRODUCTIVITY.** Ergotron's multi-monitor mounts help users "do more with less," accommodating an extended desktop for busy staff and multi-tasking students. Toggling between documents is reduced, decreasing the time it takes to complete each task, while promoting an adjustable, healthy workstation.
- **DEPENDABILITY.** Ergotron products are rigorously tested for safety and reliability, and are designed for multiple hardware refreshes. Now and for years to come.

Neo-Flex™ Mobile WorkSpace
