

Dare2Dual Global Survey Results

Ergotron's online Dare2Dual (D2D) survey, currently being conducted, queries over 1,500 SMB and Fortune 500 companies participating in Ergotron's Dare2Dual Program across North America, Europe, the Middle East, and Asia Pacific. The following preliminary results show Average Productivity Gains of 25% when working on dual display workstations.

Studies show 10 to 40% productivity gains are possible with a dual workstation.

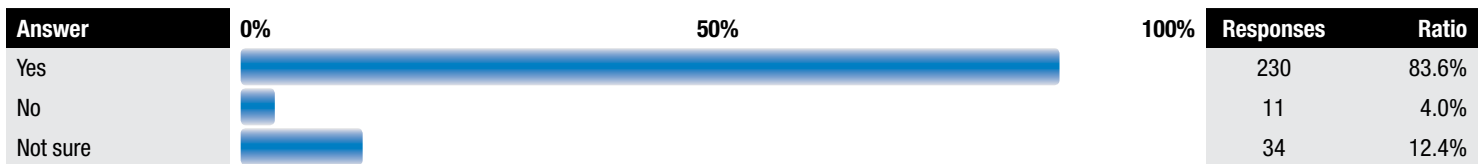

If you had to rate your overall productivity gains, what percentage increase did your D2D user(s) experience?

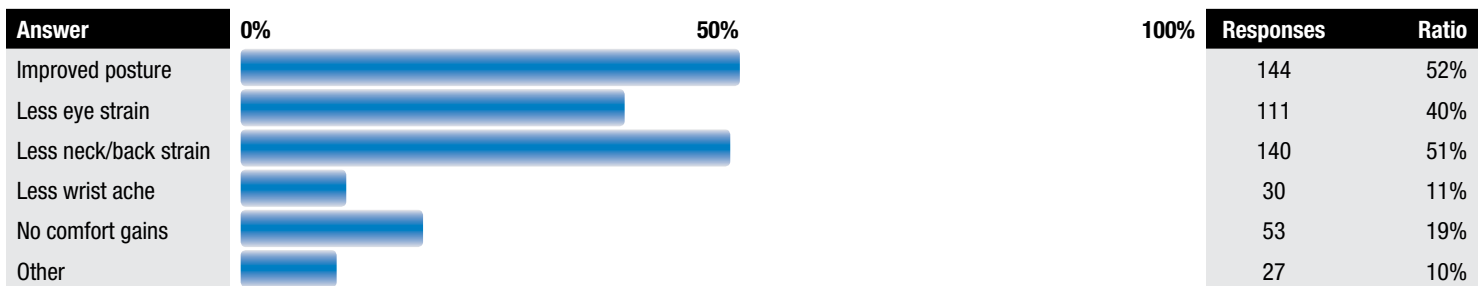

The respondents in our survey saw an average productivity increase of 25% with 8 responses of increases over 50%

In single display environments, users must "switch, toggle or resize" windows to perform the usual [computer] processes. Increasing the amount of screen "real estate" they have to work on allows dual display users to complete these tasks faster and more efficiently. Studies have proven it to be 39% easier to move data around and 32% faster to perform tasks on a dual display workstation.

Were you/your D2D user(s) able to complete these kinds of tasks faster using the dual display workstation?

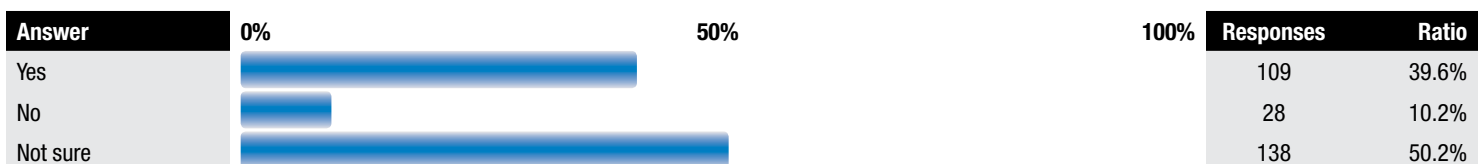

Evaluate the comfort gains D2D user(s) experienced as a result of being able to adjust their displays. Check all that apply.

Performance tests show that dual users make 33% fewer errors and are 18% faster in errorless editing of multiple tasks.

Did your D2D user(s) see a reduction of errors?

Find out what these productivity gains can mean to your bottom line at <http://payback.ergotron.com>
