- Professional packaging development: products arrive safely and container space is maximized
- Global logistics management and hub / VMI fulfillment services
- Professional marketing support: product photography, user manuals, web-tool creation and support
- Global customer service
- Continuation support

Ergotron ODM

Your full-service strategic partner

Ergotron's ODM Group has been creating unique, custom designs for applications in Education, Healthcare, Corporate Office and Digital Signage since 2002. Today, this group is highly regarded by many OEMs as a strategic partner, pursuing joint discussions regarding future product roadmaps and innovation to support and drive increased sales of their own products.

Ergotron is a full-service, end-to-end ODM. Our professional design team sits both in the US and at our manufacturing facility in China. These teams work closely together on every aspect of the design and product launch to ensure each specification and milestone is met.

Our products are manufactured at our wholly owned 140,000-square-foot facility in Dongguan, China. This is a world-class site that has a proven track record of manufacturing excellence. It has been qualified to manufacture products by some of the largest and most successful OEM companies in the world. During the product development phase, a full QA plan is documented for each individual product to ensure the highest level of quality at the lowest possible cost. Ergotron is fully compliant with the Electronics Industry Code of Conduct (EICC).

Customer	Audit Types(s) Completed	Qualified Since	Current Status
